DETAILED ACTION

1. This action is response to communications: application, filed on 03/12/2004; amendments filed on 06/30/2009. Claims 23-25, 27-30, 32-35 and 37 are pending; claims 23, 28 and 33 are amended; claims 1-22, 26, 31 and 36 are canceled.

Reasons for allowance

2. With respect to claims 23, 28 and 33, the prior arts of record, singly or in combination fails to teach the features of claim(s) limitations thereof. Specially, inter alia, it fails to teach a relay apparatus for delivering live video stream data from a server having an image sensing device to clients via a network, the relay apparatus comprising: a memory control device configured to store the live video stream data including sequence information based on a time when the live video stream data is acquired by the image sensing device in a buffer memory; a first determining device configured to determine whether a second request from a second client is received within a predetermined period after a first request from a first client which is receiving the live video stream data has been received; a second determining device configured to determine whether the buffer memory stores new live video stream data acquired after the live video stream data has been sent to the second client, based on the sequence information in the second request and the sequence information in the buffer memory, in case that the first determining device determines that the second request is not received within the predetermined period after the first request has been received; and a delivery device configured to deliver to the first and second clients the live video stream data which is received from the server having the image sensing device in accordance with the first request in case that the first determining device

determines that the second request is received within the predetermined period after the first request has been received, to deliver to the second client the new live video stream data stored in the buffer memory and the live video stream data which is received from the server having the image sensing device after receiving the second request in case that the second determining device determines that the new live video stream data acquired after the live video stream data has been sent to the second client is stored in the buffer memory, and to deliver to the second client the live video stream data which is received from the server having the image sensing device after the second request is received and not to deliver the live video stream data which has been stored in the buffer memory before the second request is received in case that the second determining device determines that the new live video stream data acquired after the live video stream data has been sent to the second client is not stored in the buffer memory.

Claims 24-25, 27, 29-30, 32, 34-35 and 37 further limit the allowed claims, therefore they are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance"
